## Installation Instructions

### Product: Allied Slide-A-Way (SAW)

Allied Windows units are easy to install. You can do it yourself or have someone familiar with making home improvements do it for you. No special skills are required.

#### Tools Needed:

You'll need a few common household tools for installation:

- Tape measure and marker (e.g., carpenter's pencil)
- Screw Gun or Drill and bits of type and size appropriate for the construction material of your home.
- Anchors appropriate for the construction material of your home. (*Screws supplied by Allied Window*)

#### MOUNTING TRACK

(All track is cut to proper lengths by AWI. Field trimming may be necessary.)

- 1) Mount head track (CS1) with #6 x 3/4" f into head screws (*supplied by Allied Window*) into pre-punched holes, alternating the screw location from front to back.
- 2) Align the jamb track directly under the head track using #8 x 1" pan head screws (*supplied by Allied Window*) into pre-punched holes, alternating the screw location from front to back.
- 3) Place notched vinyl sill track (CS2) into place at sill. (*It is not necessary to anchor the CS2 sill track.*)

#### INSTALLING GLASS OR SCREEN PANELS

- 1) Install the plain panel (panel with no handles) into the back channel of the head track. Push the panel up until the bottom of the panel clears the top of the vinyl sill track and set the panel into the back track of the vinyl sill.
- 2) Install the handle panel into the front channel of the head track. (Make sure the felt on the back of the panel is in the proper location.) Push the panel up until the bottom of the panel clears the top of the vinyl sill track and set the panel into the front track of the vinyl sill. Slide panels to their proper location.
